

CFturbo2ICEM

Automatic Geometry and Mesh Generation
in ANSYS ICEM CFD
based on CFturbo Geometries

Version 4
October 2010

The logo for CFturbo, featuring the letters 'CF' in a large, bold, sans-serif font, followed by 'turbo' in a smaller, lowercase, sans-serif font.

**Used files and their file system position
(manual installation)**

On **Windows** the installation is made by a comfortable setup program “Cfturbo2Icem*.exe”. Pre-condition is an installed ICEM and an installed Cfturbo. In this case no manual effort is necessary.

On **Linux** Cfturbo is not executable, but Cfturbo2ICEM can be used. Currently no installation program exists, therefore the files have to be installed/ copied manually with the help of this instruction.

On Linux one has to observe strictly the case sensitivity of file names.

General schema for using Cfturbo2ICEM

Files are stored in two different locations:

- ① Files for script handling in the ICEM GUI
- ② TCL scripts

The connection between ICEM and the TCL scripts is handled by the environmental variable CFTURBO8_ROOT. This variable contains the directory where the scripts are located.

Operating system	Windows	Linux
Environmental variable	%CFTURBO8_ROOT%	\$CFTURBO8_ROOT
Value assignment	automatically by installation program	depending on used shell, e.g. export (bash), setenv (tcsh)

On Windows systems where Cfturbo is installed, the environmental variable CFTURBO8_ROOT is created during the installation and points to the Cfturbo installation directory, by default „C:\Program Files\Cfturbo 8“. On Linux systems the environmental variable CFTURBO8_ROOT has to be defined manually before starting ICEM.

① ICEM GUI

These files are images (icons) and modified ICEM configuration files for displaying the CFturbo2ICEM buttons inside the ICEM GUI.

The destination directories `<ICEM-Root>` and `<ICEM-Sys>` can be localized as follows:

Operating system	Windows	Linux
ICEM installation directory <code><ICEM-Root></code>	%ICEMCFD_ROOT120% e.g. "C:\Program Files\ANSYS Inc\v120\icemcfd"	find directory by „which icemcfd“ e.g. /usr/ansys_inc/<version>/icemcfd
ICEM system directory <code><ICEM-Sys></code>	%ICEMCFD_SYSDIR% e.g. „win“	depending on processor type e.g. linux64_amd

② TCL scripts

The TCL script files are located under a directory that can be identified by the environmental variable `<CFTURBO8_ROOT>`. In this directory a new folder “script” has to be created where all TCL script files have to be copied.

Example:

Operating system	Windows	Linux
environmental variable <code><CFTURBO8_ROOT></code>	C:\Data\CFturbo2ICEM	/usr/cfturbo8
Folder „script“	C:\Data\CFturbo2ICEM\script	/usr/cfturbo8/script
